

Ethanol is not the answer

We do not want ethanol in our gas.

It cost more, has less power, waste food, and shortens engine life.

The Government subsidy of ethanol is the only reason it can compete on price!

Ethanol has 1/3 less energy than gasoline, when ethanol is mixed with gasoline it reduces the MPG, and ethanol takes more energy to produce than you can get out of it!

All the corn used to make ethanol should be used for food. There are people right here in this country (not some 3rd world country) that go to bed hungry !

Ethanol breaks down the rubber, plastic, and aluminum in today's and yesterday's engines, especially small and 2 cycle engines used in boats, lawn mowers, weed eaters, generators etc...

We want to able to purchase ethanol free Gasoline at our local gas stations; we demand the repeal of requiring ethanol at the pump!

Signed

David McGeorge U.S. Citizen, Tax payer, combustion engine owner Sept. 18th 2009
